

Energy

On July 19, 2011, solar paneling was installed over the entire facility. To date, this initiative has saved a lifetime energy of 2,094,197 kWh. To further illustrate the positive impact, this equates to 38,554.17 trees grown for 10 years, 3,462,685.63 car miles not driven, and 4,054.37 barrels of crude oil conserved. Air quality is the second largest area of impact avoiding 3,314,940.03 lbs. of carbon dioxide emissions, 5,350.67 lbs. of nitrogen dioxide emissions, and 12,357.86 lbs. of sulfur dioxide emissions.

In the summer of 2018, LED lighting was installed inside and outside of the corporate office and warehouse. In the conference room, there is an energy management software system which controls lighting, the computer, and monitor. All employees are trained on basic conservation practices, such as turning off lights and equipment when not in use, controlling the thermostat, and activating energy saving features on equipment.
