Policy Statement on Offering Environmentally Preferable Services

At Hyatt Creative Design, we are committed to promoting sustainability and environmental stewardship in all aspects of our business operations, including the services that we offer. To this end, we have developed a set of guidelines for offering environmentally preferable services that prioritize eco-friendly and sustainable practices.

Our guidelines are designed to align with our broader environmental policies and practices, and they focus on three key areas:

1. **Sustainable Design:** We prioritize sustainable landscape design practices that minimize environmental impact and promote biodiversity, such as incorporating native plant species, designing for water conservation, and using eco-friendly materials.
2. **Waste Reduction:** We prioritize waste reduction and diversion in our design services, including designing for composting and recycling, minimizing the use of disposable materials, and repurposing existing materials.
3. **Carbon Footprint:** We prioritize designing services that minimize carbon emissions and prioritize renewable energy sources, such as designing for passive solar heating and cooling, and incorporating renewable energy systems into our designs.

To ensure that our guidelines are effectively implemented, we have established the following guidelines:

- All design services must be guided by our environmentally preferable services guidelines and must prioritize sustainability and environmental stewardship.
- All design services must be reviewed and approved by our sustainability leader to ensure that they align with our guidelines and broader environmental policies and practices.
- We will regularly review and update our guidelines to ensure that they remain aligned with our sustainability goals and the latest environmental best practices.

We believe that offering environmentally preferable services is a critical component of our commitment to sustainability and environmental stewardship, and we are dedicated to implementing these guidelines effectively in all aspects of our design services. By prioritizing environmentally preferable practices, we can make a meaningful contribution to a more sustainable future for all.
