

New Jersey Natural Gas Company

Energy Efficiency Programs

For the last fifteen years, NJNG has been a leader in energy efficiency in New Jersey. In 2006, NJNG successfully implemented a decoupling mechanism with support from our regulators. What began as Conserve to Preserve® (CTP), grew to include SAVEGREEN in 2009. SAVEGREEN provides customers with innovative energy-efficiency solutions, financing and incentives to help them install energy-efficient appliances in a cost-effective manner.

Collectively, CTP and SAVEGREEN have helped customers save over \$435 million through reduced usage initiatives since inception.

In fiscal 2021 alone, SAVEGREEN invested approximately \$31 million in a variety of programs to support the installation of new and efficient equipment, resulting in annual energy savings of nearly 4.3 million therms or nearly 23,000 metric tons of CO₂. This is equivalent to the annual energy usage of 2,760 homes.
