Sustainability & Responsibility

At Blanc Display Group we believe it is our responsibility and duty to engage in sustainable practices. In an effort to be more involved and effective in the reduction of our carbon footprint, we are committed to minimizing the environmental impact of our products by using environmentally-friendly materials and manufacturing processes whenever possible.

It is not only in our daily routine that we are dedicated to being more ecologically focused and energy efficient, we are in constant pursuit of new products, technologies, initiatives and methods that will exceed regulatory compliance codes.

Our commitment can be found in every level of the company. We continually strive to reduce or eliminate sources of pollution and waste materials that are within our control, whether it is through our operations management, supply chain or customer service.

Our pledge to cleaner work initiatives starts at home. One way we accomplish this is by running our entire facility with renewable energy. In an effort to re-use and/or eliminate ALL of our plastic waste, we recycle the scraps from our printing and vacuum-forming operations and incorporate them into the manufacturing of our plastic extrusions. Our extrusions are produced with as much as 100% recycled materials. In addition to these actions, we offer a complimentary recycling program to qualified customers, wherein old signage is picked up and then either recycled or disposed of responsibly. These procedures underscore our determination and commitment to implementing better "green" business practices.

We continually monitor and assess our progress, take corrective action where and when necessary and report on the status of our sustainability efforts annually. These checks and balances ensure that we at Blanc Display Group are fulfilling our promise to our customers, our community and ourselves.
